This study focused on the assortative mating as a contextual factor explaining the phenomenon of intensifying income inequality and polarization in Korea. Especially as pointed out by Kalmijn(1991), the assortative mating was paid attention on moving from ascriptive assortative mating centered on social economic position of parent to accomplished assortative marriage centered on education and occupation of oneself and spouse, and the study was focused on the accomplished assortative mating. Hence, the study analyzed the effects of individual accomplished assortative marriage such as education, occupation, etc on the household income as targeting double income at economic activity ages. As considering different education level and economic activity level, the effect of the assortative mating on household income at each cohort. Also, in order to analyze the effects of the assortative mating on income inequality, the marginal effects of the educational and occupational assortative marriage was analysed through the quantile regression analysis.

Key words: assortative mating, income inequality, educational assortative mating, occupational assortative mating, quantile regression analysis

V. 결론

요약
본 연구는 한국 사회에서 소득불평등과 양극화가 심화되는 영향 요인의 하나로 동질혼에 초점을 맞추었다. 특히 Kalmijn(1991)의 가설과 같이, 동질혼이 부모의 사회경제적 지위를 중심으로 한 귀속적 동질혼에서 자생과 배우자의 교육과 직업을 중심으로 한 성취적 동질혼으로 이동하고 있다는 태 주목하고, 성취적 동질혼에 연구의 초점을 두었다.
