Abstract

This research aimed to focus on how the depression changes through the mediation effect of satisfaction with family relationship between the social participation and depression. This research was based on the panel survey to explore ageing society in 2006 made by Korean Labor Institute, which studied 555 parenting grandparents rearing grandchild. SPSS 17.0 Package was applied to analyze the data and multi-regression analysis was conducted.

The results of the study were as follows. First, health, number of social participation in parenting grandparents and health in co-parenting grandparents were the influencing factors to the relation between the social participation and depression. Second, depression were reduced by the satisfaction with family relationship. In parenting grandparents, age, education, health, survival of spouse, number of social participation, and in co-parenting grandparents, health, survival of spouse were statistically significant. Third, satisfaction with family relationship had only partial mediation effect on the relation between the social participation and depression in parenting grandparents.

주제어(key words) : 주양육자(parenting grandparents), 공동양육자(co-parenting grandparents), 사회참여(social participation), 우울(depression), 가족관계만족(satisfaction with family relationship)

I. 서론

통계청(2005)에 따르면 2000년도 우리나라 전체 3,809,181세대 중 조손세대는 39,803 가구(전체 세대 대비 1.09%)였으나 2005년에는 전체 4,536,265세대 중 51,569세대(전체 세대의 1.2%)로, 5년 동안 조손가구의 절대수가 22.8% 증가한 것으로 조사되었다. 조
